I use the following C# code to calculate a MD5 hash from a string It works well and generates a 32-character hex string like this:900150983cd24fb0d6963f7d28e17f72.. It makes no sense Please read: http://en wikipedia org/wiki/Cryptographichashfunction^.. I tried using a decrypting software program but it states the hash should be of exactly 16 bytes. Nicely, there is, but nofairmethod to do it That'beds kind of the stage To check out if someone is entering the proper password, you require to MD5 whatever the consumer entered, and notice if it matches what you have got in the database.. Notice: Be sure to fixed a 16, 24, or 32 character random thread in the essential choice of the config/app.. I am using program code$enrypt=md5($pass)and inserting$encryptto data source I desire to find out a method to decrypt them.. Nevertheless you could use something like this to encrypt / decrypt passwords/etc securely:Making use of a encypted method with a sodium would become even safer, but this would become a good next step past simply making use of a MD5 hash.. Rather you should use hash make and examine Somnath MulukSomnath Muluk36k1717 gold badges188188 silver badges209209 bronze badgesHashes can not end up being decrypted check this out. 0041d406d9 App Store Os X Lion
